EDUCATION

SAINT LOUIS UNIVERSITY

BS Computer Science

Baguio City

2026

Relevant Coursework: Data Structures and Algorithms, Web Development, App Development, Information Management, Artificial Intelligence, Data Science, Computer Programming 1-3, Software Development

WORK EXPERIENCE

PHILIPPINE MILITARY ACADEMY

Software Developer Intern

Ft Gen.Gregorio, del Pilar, Baguio

Jun 2025 – Aug 2025

- Digitized the Personal History Statement form process, reducing manual paperwork and processing time, by building and integrating a Laravel-based web application for data entry and management
- Improved data accessibility for staff by developing key modules of the application in collaboration with a software development team

GIFT OF GRACE

Software Developer - Remote

Baguio City

Oct 2025 – Mar 2026

- Led end-to-end development of a full-stack company website and RAG-powered chatbot, from requirements gathering and architecture design through deployment, replacing a static Google Sites page with a production-grade digital presence
- Engineered and iterated on prompts for the chatbot's NLP engine to accurately resolve FAQs and classify buying intent, tuning instructions based on real user query patterns to improve response accuracy
- Integrated a real-time Google Sheets pipeline so non-technical staff could update pricing and inventory without developer intervention, ensuring data flows respected client data-handling and privacy requirements

PROJECTS

Concert Management Application

- Developed a concert management application using Java and MVC architecture, improving event scheduling and ticket management.
- Streamlined database integration to manage concert details and user reservations efficiently.

NaviHub – SLU Information Web Application

- Created a chatbot and FAQ system to provide quick access to school-related information.
- Followed Agile principles by implementing sprints, gathering user feedback, and iterating on the design and functionality based on professional input.
- Built using HTML, Java, CSS, Bootstrap, Node.js, SQL, and API Integration ensuring responsive and scalable design.

Agent-Based Framework for Topic Modeling & Sentiment Analysis of Public Discourse

- Designed and built a modular NLP pipeline to analyze multilingual, code-switched social media discourse (English/Filipino) surrounding Baguio City's Panagbenga Festival, addressing gaps in existing monolingual, static-dataset tourism analytics approaches
- Engineered a hybrid architecture combining transformer-based sentence embeddings, BERTopic topic modeling, and LLM-assisted sentiment analysis, refined across 7 pipeline iterations using a Design Science Research methodology
- Processed 2,428 multilingual social media posts (2022–2026), extracting 165 discussion topics across 55 semantic clusters with a topic coherence score of 0.5067
- Identified actionable insights for tourism stakeholders, linking positive sentiment to cultural identity and parade experiences, and negative sentiment to traffic congestion and crowd management

ADDITIONAL

TECHNICAL SKILLS

Languages & Frameworks: Java, JavaScript/TypeScript, Python, PHP (Laravel), React

Generative AI: RAG, LLM APIs, LangChain, LangGraph (familiar)

AI-Assisted Development: Prompt & context engineering, responsible AI & data privacy considerations in system design

Databases & Tools: MySQL, Git, Docker

Web Technologies: HTML/CSS
